

# Transnational Stakeholder Policy Statement

*An initiative to support Repair & Re-use Centres and Networks in Central Europe*

*The opinions expressed in this document are the sole responsibility of the author and do not necessarily represent the official position of the CENTRAL EUROPE Programme.*

**The Central Europe Project CERREC fosters the implementation of repair- and re-use centres and networks** according to WFD 2008/98/EC where “preparing for re-use” is introduced and measures (implementation of re-use networks) are recommended.

**The main aim is prolonging the product life time through re-use, and subsequently saving resources and improving energy efficiency.**

Re-use refers to all three dimensions of sustainable development:

- **Ecological sustainability** – Improving resource efficiency by reducing wastes and emissions by extending the lifetime of products.
- **Social sustainability** – Creation of “green jobs” for low qualified / long-time unemployed people as well as providing good quality products for people with low income.
- **Economic sustainability** – Strengthening regional economies by stimulating co-operations between different actors and development of new business fields (especially for social enterprises, SMEs and service providers).

Our approach for a proper use of products contributes to a **more sustainable lifestyle** by “mainstreaming” re-use as an alternative way of fulfilling customer needs. In this broad context re-use not only refers to waste management legislation but also has **interfaces to a number of strategies, policies and concepts** in the area of sustainable development (e.g. Europe 2020 strategy<sup>1</sup>, Sustainable consumption and production and Sustainable Industrial Policy Action Plan<sup>2</sup>, European Strategy on Sustainable Development<sup>3</sup>, etc.).

Being aware of these mutual interrelationships is crucial for supporting the successful implementation of re-use into practice. This can be done by **cooperating** with familiar initiatives, **forming coalitions, using synergies** and by that **gaining a higher impact to policy decision makers**.

## OUR MISSION

We – the CERREC project partners and External Advisory Board members – aim to create new and attractive re-use offers for citizens: avoiding used products to be waste by bringing them to special collection points. If fulfilling requirements the products will be **prepared for re-use** and **sold in re-use shops** at high quality standards.

To reach our goal:

We **foster the exchange of know-how** between countries and regions to be as efficient as possible with available resources.

We **build up modular solutions** for re-use centres and networks to fulfil the needs of all CE countries by easy adaption.

We **define an accreditation system** and will supply quality standards in order to fulfil all the concerned regulations and equalise the playing field for all stakeholders.

We **develop action plans** for implementing re-use activities in CE countries.

We **implement pilots** for testing the developed solutions in several CE countries.

## CALL FOR SUPPORT

We **invite all concerned stakeholders and experts to participate** in the process of finding the best adapted solutions for creation of re-use centres and networks.

We **appeal the local and regional policy makers to foster the installation** of re-use centres and networks.

We **call for communication** and **raise the public awareness** to move towards a more sustainable life-style in Europe.

We ask the **policy makers** to

- **integrate re-use obligations** into national / regional waste laws, waste management plans and concepts, especially into the national waste prevention programs;
- **oblige WEEE collection systems to collect re-usable WEEE separately** from WEEE-scrap and cooperate with re-use networks and centres;
- **foster** waste owners / waste producers (e.g. companies) to collect re-usable items separately and **hand it over to re-use centres**;
- **foster education** about re-use, re-use centres and collection points for the public audience;
- **foster the sale of re-used goods** by re-use-friendly trade regulations.

We ask the **municipalities** to

- **establish collection points** for re-usable goods;
- **re-organise bulky waste collection** systems to separate re-usable goods;
- **establish co-operation** between repair enterprises, social enterprises, social co-operatives and municipalities to foster re-use activities.

With the implementation of repair and re-use centres and networks we will **contribute to** a more **sustainable life-style** by extending use in the product lifetime and reducing resource needs. We will also **support job creation** even for low qualified or long time unemployed people.
